

## Rainier Conservation Program

Rainier Management is doing their part in "eco-friendly" technologies. We recognize the great need for our communities to become more energy efficient by replacing all traditional incandescent bulbs with compact fluorescent light bulbs which use up to 79% less energy.

Please be advised that all incandescent bulbs in permanent light fixtures throughout your apartment have been switched to these energy-efficient fluorescent bulbs. These energy-efficient fluorescent bulbs can be purchased at most major hardware and grocery stores.

The energy-efficient bulbs will reduce your monthly electric bills not only in the power used by the bulbs but also in the reduction of your HVAC use. These bulbs emit only a fraction of the heat that incandescent bulbs do.

It is mandatory that you continue to utilize these same bulbs in the permanent fixtures throughout your apartment as they go out. Upon move-out, you will be charged for any light bulbs that are taken out and removed.

Thank you for your cooperation in helping us do our part to become a more energy-efficient community.
